de-pollution technology

SEDA Urea liquid suction device L-51108

According to the european ELV-Directive, all liquids must be removed from the vehicle during the recycling process.

In collaboration with automobile manufacturers SEDA has recognized this problem and developed a simple extraction system for urea. As a mobile suction unit **MAXI** or **MINI**, it is easy to transport to the vehicle. With an pneumatic, specially for AdBlue® designed diaphragm pump suction is done with a tube through the tank inlet. In addition, it is possible to drain and collect the urea via a funnel below the vehicle. Using a suitable AdBlue® filling nozzle the urea can be pumped into a disposal container.

Also an innovation is the mobile **Extension set** that at all systems can be mounted.

Your benefits

- ✓ Efficient extraction of urea
- ✓ Specially suited to urea
- ✓ Extraction via urea tank inlet or from underneath the vehicle
- ✓ 200 liter capacity
- ✓ Easy to move and empty

Also available as MINI as well as as an extension set for all SEDA systems!

Emptying by nozzle in a storage tank

Stainless steel in-line filters:
Sieve to be cleaned weekly

By connecting with an adapter on the original line to the engine it is among other possible to capture the urea. This is optionally available on request.

TECHNICAL DETAILS

Compressed air: 7 bar
Capacity: up to 24 l/min

ORDER INFORMATION

L-51108 SEDA Urea liquid suction device MAXI
L-51109 SEDA Urea-Extension-Set
L-51114 SEDA Urea liquid suction device MINI
