Compressed air supply

Compressed air is necessary for draining with SEDA equipment and other applications, but is not always available everywhere. So here we offer a great solution for a SEDA compressor.

A compressed-air driven equipment is of elementary importance for the explosion protection. With the mobile gasoline compressor you have a compact and powerful device.

With up to 1.600 l/min, the compressor is optimally suited to be able to operate a SEDA EasyDrain system **completely by it's self.**

Utilize your recovered fuel and work through this most cost-efficiently. The compressor also can be used for another compressed air equipment.
