

SEDA DRAIN TOWER

A-51048

End-of-life vehicle depollution system

The SEDA DrainTower is available as single or double station and is characterized by its compact design and high efficiency.

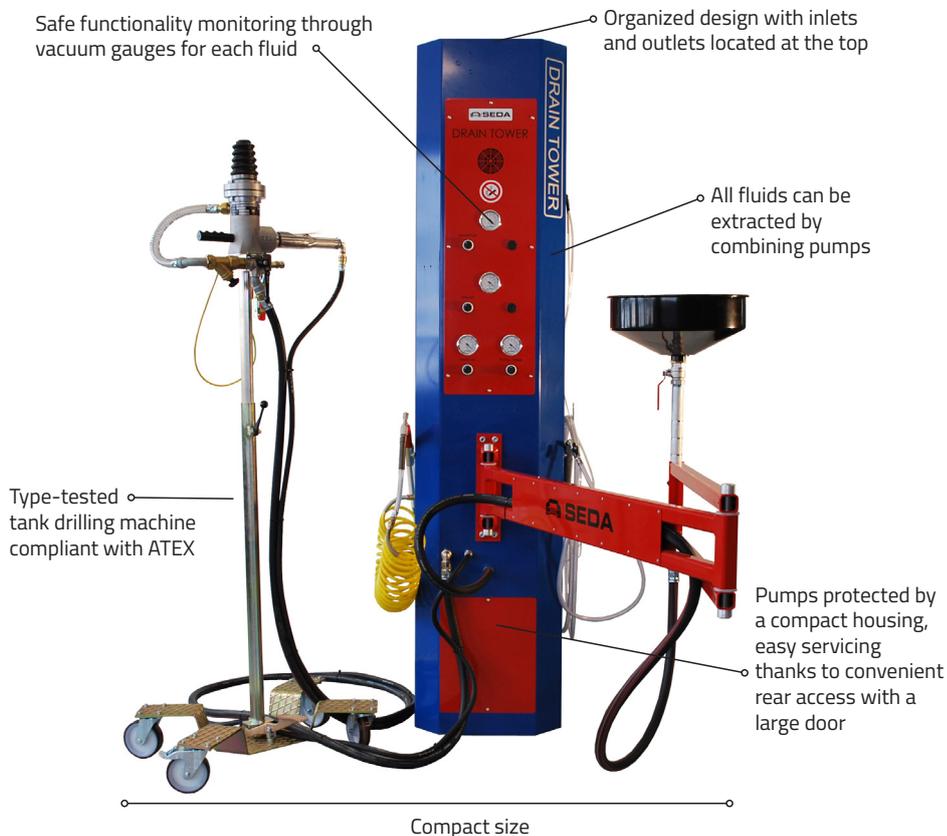

Depending on the system configuration, the ATEX-certified tank drilling machine combined with high-performance vacuum pumps, enables the safe extraction of gas / diesel, waste oil, antifreeze, brake fluid and wiper fluid from end-of-life vehicles.

DrainTower double

Safe functionality monitoring through vacuum gauges for each fluid

Organized design with inlets and outlets located at the top

All fluids can be extracted by combining pumps

Type-tested tank drilling machine compliant with ATEX

Pumps protected by a compact housing, easy servicing thanks to convenient rear access with a large door

Compact size

BENEFITS

- Complete depollution
- Pneumatic control panel
- Clean and efficient operation
- High performance pumps
- Explosion protection compliant with ATEX Tank drilling machine

SEDA DRAIN TOWER

A-51048

Efficient design

Easy access for servicing

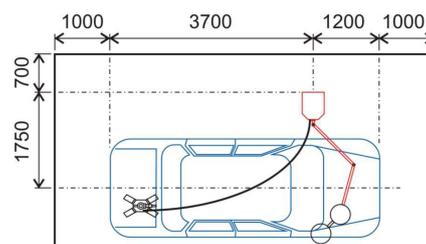

The SEDA Drain Tower features a fully plumbed tower that includes pumps, filters, and airprocessing unit. The system is modular in design, allowing various components to be configured based on requirements.

For fuel extraction, separate pumps for gasoline and diesel are available, or alternatively, a combined pump for both fuels, each equipped with an integrated filter and pneumatic control. A heavy duty tank drilling machine comes on a caster base.

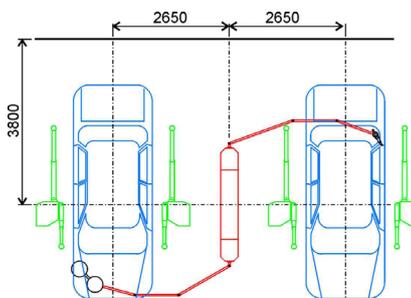

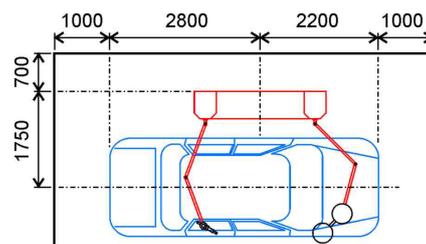

For waste oil extraction, the system offers options such as a waste oil pump, a swing arm with a single or double funnel, as well as a gearbox drilling machine and a suction gun for hydraulic oil. In the brake fluid section, depending on requirements, either a vacuum container or a brake fluid pump is integrated, complete with all necessary hoses and attachments.

There are two model series:

> SEDA DrainTower single

> SEDA DrainTower double
