- Additional technical specifications
- Online configurator

Safe airbag deployment in the vehicle

The SEDA MultiPlex enables the deployment of all pyrotechnic components in vehicles.

The device is compatible with all vehicle types, thanks to universal pin cables that allow connection to the wiring harnesses of various vehicle SRS control units. No additional adapters are required.

Using a control panel that visually displays all available airbags, pyrotechnic components can be safely deployed via a two-finger safety system.

Before connecting, it is essential to ensure that the vehicle is completely de-energized: all batteries and auxiliary batteries must be disconnected, and the terminals removed. For the ST cable version, power is supplied via a separate car battery.

TECHNICAL SPECIFICATIONS

Weight	1.10 lb
Ignition current per Ignition circuit	up to 5 A
Ignition Duration	250 ms
