

## SEDA UREA SUCTION DEVICE

L-51114 / L-51108 / L-51109

Extraction using a drill device into the equipment tank

**According to EU regulations, all fluids must be removed from vehicles during the recycling process. In collaboration with automobile manufacturers, SEDA has developed a straightforward extraction system for urea.**

The mobile extraction device, available in **MAXI** and **MINI** variants, can be easily transported to the vehicle. Equipped with a pneumatic diaphragm pump specifically designed for AdBlue®, the system enables simple extraction via a hose connected to the tank filler neck. Additionally, urea can be drained and collected using a funnel positioned beneath the vehicle.

Another innovative feature is the mobile expansion set, which can be easily mounted on all systems.

### BENEFITS

- Efficient urea extraction device
- Materials specifically designed for urea
- Extraction via tank opening or beneath the vehicle
- Easy to transport and empty

MAXI

MINI

Also available as an expansion set for all SEDA systems.
